

Anthony Kish

Holbrook, NY • 631-432-6901 • anthonykish@outlook.com • anthonykish.netlify.app

EDUCATION

Binghamton University, Thomas J. Watson College of Engineering and Applied Science

B.S. Computer Engineering + M.S. Computer Engineering (4+1 Combined Program)

B.S. May 2025 • M.S. Expected May 2026 • GPA: 3.85/4.00

TECHNICAL SKILLS

Languages: Python, JavaScript, C++, C, SQL, Java, MATLAB, React

Web/Backend: Django, HTML, CSS, Bootstrap, REST APIs

Data/Tools: Pandas, MySQL, Docker, Jenkins, AWS, Linux, Git, Pytest

Other: Vivado, Verilog, VHDL

SOFTWARE PROJECTS

MARL, End-to-End Survey to SQL Clinical Data Pipeline., Sole Developer (Full Stack) *Dec 2025 – Feb 2026*

- Built a full-stack Django web application for clinical data collection, reporting, and database management.
- Implemented autosave functionality to continuously persist form data during multi-step form completion.
- Designed relational database schema and backend APIs to store and retrieve structured clinical data.
- Integrated external Qualtrics survey responses into the application using Response IDs to auto-populate patient data.
- Developed secure magic-link authentication system for passwordless clinician login and secure session access.
- Built data processing pipelines using Pandas to clean, normalize, and compute derived metrics from assessment data.

NAI, Network Integrated Testing Environment., Software Automation Intern *May 2025 – Aug 2025*

- Co-developed automated test framework for multiple I/O boards using Python and pytest, reducing manual testing time by 50% and allowing 6x more modules to be tested at once.
- Built containerized testing environment using Docker to standardize test execution across all of production.
- Created comprehensive test suites for hardware interface validation, covering functional testing and error handling.

Capstone Project., Lead Software Engineer *Aug 2024 – May 2025*

- Coordinated with a team of four, Binghamton University faculty advisor, and sponsors from Lockheed Martin.
- Developed multi-robot LiDAR mapping and map-merging system on Linux using TurtleBots.
- Developed the capability of object detection with a raspberry pi camera and server-side communication through our personal secure website.
- Presented to peers, faculty, and industry professionals at an end-of-year exposition, receiving outstanding appraisal.

•

PROFESSIONAL EXPERIENCE

Motion Analysis Research Laboratory (MARL), Software Engineer (Full Stack) | Binghamton, NY *Oct 2024 – Present*

- Develop and maintain a Django-based clinical data platform used for patient assessments, reporting, and research workflows.
- Implemented continuous autosave functionality to persist form data across multi-step workflows while users navigate between forms.
- Designed frontend interfaces using HTML, CSS, Bootstrap, and JavaScript to support seamless navigation and data entry workflows.
- Built backend data pipelines using Python, Django, MySQL, and Pandas for data validation, processing, and storage.
- Integrated Qualtrics survey data via Response ID to automatically populate clinical forms from external survey responses.
- Implemented secure magic-link authentication allowing clinicians to access patient sessions without passwords while maintaining data privacy.
- Support AWS deployment, database management, and live troubleshooting during clinical sessions.

North Atlantic Industries., Software Engineer Automation Intern | Bohemia, NY *May 2025 – Aug 2025*

- Developed Python automation test frameworks using pytest to validate hardware interface modules.
- Built containerized testing environments with Docker to standardize test execution across development and production systems.
- Created CI/CD pipelines in Jenkins to automate testing workflows and deployment processes.
- Automated testing for 7 hardware modules, significantly reducing manual testing time and improving test coverage.
- Collaborated with software and hardware teams to integrate automated testing into production workflows.
