

# Anthony Kish

Holbrook, NY • 631-432-6901 • anthonykish@outlook.com • Portfolio: anthonykish.netlify.app

## EDUCATION

---

**Binghamton University, Thomas J. Watson College of Engineering and Applied Science**

*M.S. Computer Engineering • May 2026 • GPA: 3.85/4.00*

*B.S. Computer Engineering • May 2025 (4+1 Combined Program)*

## TECHNICAL SKILLS

---

**Languages:** Python, JavaScript, TypeScript, C++, C, SQL

**Frontend:** React, Next.js, Vite, TanStack Query, TanStack Router, Zustand, React Hook Form, Zod, Tailwind CSS, shadcn/ui, Radix UI, Recharts

**Backend:** FastAPI, Django, SQLAlchemy, Alembic, Pydantic, Celery, Redis, Uvicorn

**Databases:** PostgreSQL, MySQL, SQLite

**Cloud / Infrastructure:** Azure (Blob Storage, Queue Storage, Form Recognizer, AD/MSAL), AWS, Docker, Railway

**AI / Data:** OpenAI SDK, Pandas, LLM-assisted development (Cursor, Claude)

**Testing / Tooling:** Pytest, Vitest, React Testing Library, Git, Ruff, pre-commit, Sentry

**Other:** Linux, ROS2, REST APIs, Verilog, VHDL

## PROFESSIONAL EXPERIENCE

---

**Alai Partners, Software Engineer** | Remote

*May 2026 – Present*

- Shipped 40+ features across 3 client-facing platforms, building end-to-end full-stack solutions using **React**, **Next.js**, **TypeScript**, **FastAPI**, and **PostgreSQL**.
- Automated 62% of client billing operations in June, processing 10,000+ invoices through document intelligence pipelines leveraging **Azure Form Recognizer**, **OpenAI SDK**, and **Celery/Redis** background workers.
- Contributed to \$170K in client revenue growth in Q2 by delivering AI-assisted data extraction, document processing, and workflow automation features.
- Built async backend services with **FastAPI**, **SQLAlchemy 2.0**, **Pydantic v2**, and **Alembic**, integrating **Azure AD/MSAL** auth, **Blob/Queue Storage**, and **Sentry** observability across multiple client environments

**Motion Analysis Research Laboratory** | *Software Engineer* | Binghamton, NY

*Oct 2024 – May 2026*

- Built and maintained a full-stack Django clinical data platform supporting patient assessments, multi-step intake workflows, and research reporting across live weekly study sessions.
- Designed frontend interfaces with HTML, CSS, Bootstrap, and JavaScript; built backend pipelines with Python, Django, MySQL, and Pandas for validation, processing, and metric computation.
- Automated clinical data ingestion pipeline, eliminating manual data parsing and saving researchers ~3 months of work per study cycle.

## SOFTWARE PROJECTS

---

**NAI, Network Integrated Testing Environment, Software Automation Intern**

*May 2025 – Aug 2025*

- Designed and developed automated Python and **pytest** test frameworks for 7 hardware I/O modules, reducing manual testing time by **50%** and enabling **6x** greater module throughput.
- Built **Docker** containerized environments and **Jenkins** CI/CD pipelines to standardize test execution and automate hardware validation workflows, replacing a decade-old legacy testing library.

**Swarm Search & Rescue System (Lockheed Martin Sponsored).**, *Lead Software Engineer*

*Aug 2024 – May 2025*

- Led a team of 4 engineers on a Lockheed Martin-sponsored multi-robot search-and-rescue system using **ROS2**, **Python**, and **LiDAR-based SLAM**, successfully migrating from ROS2 Foxy to Humble and achieving coherent multi-robot map merging — a milestone two prior teams had failed to accomplish.
- Engineered a map-merge pipeline using **slam\_toolbox** with fixed initial robot positions and odometry-based occupancy grids, enabling three robots to produce and merge individual LiDAR maps covering 115+ sq ft into a single coherent environment map.
